

SUPERNOVA HOTEL ROTTERDAM

sib

Troweled Concrete Look
Low Thickness Joint Free
Installed on Wood

**SIB Extreme
Trowel** is screeded
out on wood in only 14
mm thickness

Highlights:
Abrasion Resistance
Compressive Strength
Flexural Strength
No Shrinkage

A mesh installed over the
wooden boards makes
the installation safe.

sib

Most engineers would say it is impossible to install
cement screed on wood – they are proven wrong.

The wood or fiberboards should be well
fixed to the base. It is important to annulate
the movements in the joints between the
boards.

The joints must be properly meshed over,
to avoid straight lined up down movement
on the Extreme Trowel Floor.

The fiber mesh must be installed so it
is totally flat and covers all joints.
Afterwards the floor is fully primed
and overed with sand carpet.

Troweled Floor Design

The floor material is poured out on the floor and screeded out with a gauge rake.

SIB EXTREME TROWEL is classified as Ultra High Performance Concrete.

Applied in a 14 mm thin wear layer the SIB Extreme Style has a low environmental impact. The products are VOC free.

After settling it trowelled to the desired finish.

Trowel with metal blades will give more trowel effects on the floor. If plastic pans are used the floor can be more uniform in appearance.

The floor is installed by Concraft Studio, who have become a reference company in decorative concrete flooring in the Netherlands.

SUPERNOVA HOTEL

Is a contemporary hotel concept that fuse Sleeping in cosy nice rooms, an intimate listening bar & the Superette Night shop inspired by exotic tokos.

The floors are made in 3 different colors to fit the environments, inspired by the neighborhood's rebellious but creative personality.

The floor provide aesthetics and performance. The floors are intelligently used to brighten up and the use of Light grey, green and pink works fantastic in the different atmospheres.

Terrazzo is discretely used in the bathroom furniture.

Containr Affairs

Has designed this contemporary hotel concept.

They have created a unique and refreshing spatial design, creating a hotel that feels familiar, established and like it's already around forever.

The hotel has 3 Ton-sur-Ton environments inspired in the neighbourhood, own interest in life, surroundings, textures, materials, craft and patina.

The floors are slightly lighter than the walls.

The bar and restaurant area is designed in Ton-sur-Ton Green.

The area is in continuation of the light grey entrance/shop area.

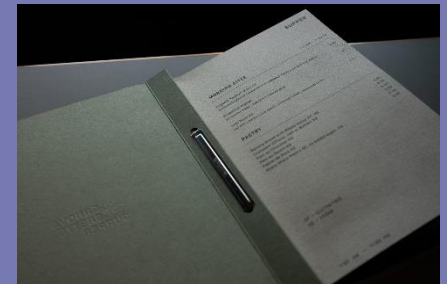

The SIB Extreme Trowel has a green/grey tone and is slightly “softer” in tone than the walls.

The design is raw, but balanced and creates a cosy cosmopolitan atmosphere.

The menu cards, wine labels and drink coasters are all designed in a soft green tone, very close to the floor color.

The hotel is designed and custom down to the smallest detail.
Privat label Wine.

sib

The light green/grey concrete floor look, discretely reflects the natural light and brightens up the room.

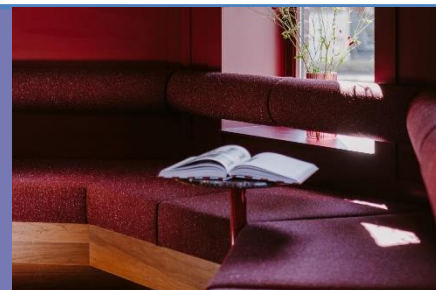

Ton-sur-Ton with warm red tones. The lounge area is intimate and cosy.

The spatial design is unique and refreshing. The soft toned pink floor enhance the natural light.

The warm colours on wall and furniture and well selected decoration gives a cosy space, that contrast to the pink concrete floor and rough industrial sealing.

In the lounge area the menus are pink and match to the pink concrete floor.

Supernova hotel been designed as a complete concept.

sib

sib

Notice how the floors are toned to match the colours on the walls and discretely change to a darker cosy green tone in the bar area.
